PROTECT AND PREVENT

Calf Jackets

The Calf Wear calf jackets have been developed in Wisconsin with the experience of many cold winters. You will find them ruggedly designed, durably crafted and perfectly form fitting.

The calf jackets are made of three layers - water repellent Corden™ fabric protects a layer of moisture wicking Thinsulate™ which is supported by a soft and comfortable lining.

calf wear

Backpack

Use this backpack to keep your colostrum at the right feeding temperature for your calves. Take the load off your arms and keep the heavy colostrum on your back. Allow both of your hands to work with the calves. Includes stainless steel tube feeder holder.

Hat

Whether you need to cool off or warm up, we have the right hat for you. The mesh back cap will keep you cool in the summer and our moisture wicking winter stocking cap will keep you dry and warm.

Show off your love for your calves.

Three Sizes

Three Sizes in Three colors make it easy to get the right sizes for your calves and to find the right size when you are in a hurry.

Small = red
Large = black
Extra Large = green

Made in Wisconsin

We produce our calf jackets right here in Wisconsin. We know what a tough winter looks like and how it can affect a little calf. All our experience went into developing a high quality calf jacket that is designed to withstand the coldest temperatures.

Adjustable Straps

Each Calf Wear jacket has two adjustable straps that reach from the calf's belly to its hind legs to prevent irritating the navel. Straps are fully removable for easy washing and longer lasting jacket.

Contoured Back

Calf Jackets are designed with a contoured back to limit staining and to prevent soiling. Contoured back also allows for better mobility of the calf.

Front Closure

The Calf Wear jackets, unlike most others, do not include any Velcro. This prevents debris from getting caught and stuck to the jacket. It also eliminates a weak point of most calf jacket designs.

UV Thread

The Calf Wear calf jackets are produced with a unique UV thread. The thread goes through a specially formulated process that ensures durability and strength where thread is exposed to UV sunlight radiation and acidic materials to create a longer lasting jacket.

SUCCESSFUL DAIRIES MANAGE COLOSTRUM

“With ColoQuick, calves gained 19 lbs more in 8 weeks”

“Colostrum has always been important to us, so we had developed a very sophisticated protocol for feeding calves as quickly as possible after birth. When we learned about the ColoQuick we ran a test of its effectiveness. We put calves into two groups, first one was fed colostrum with the ColoQuick system and the other using our protocol. We weighed the calves at birth and at 8 weeks old (1 week after weaning). The calves in the ColoQuick group gained on average 19 lbs more than those fed the other way.”

- Ionel S., Fulton, MI 3,600 cows
